

## Installing ePete on OSX 10.8 and above.

1. [Go to java.com and click on the Free Java Download as illustrated below:](#)

# JAVA + YOU, DOWNLOAD TODAY!

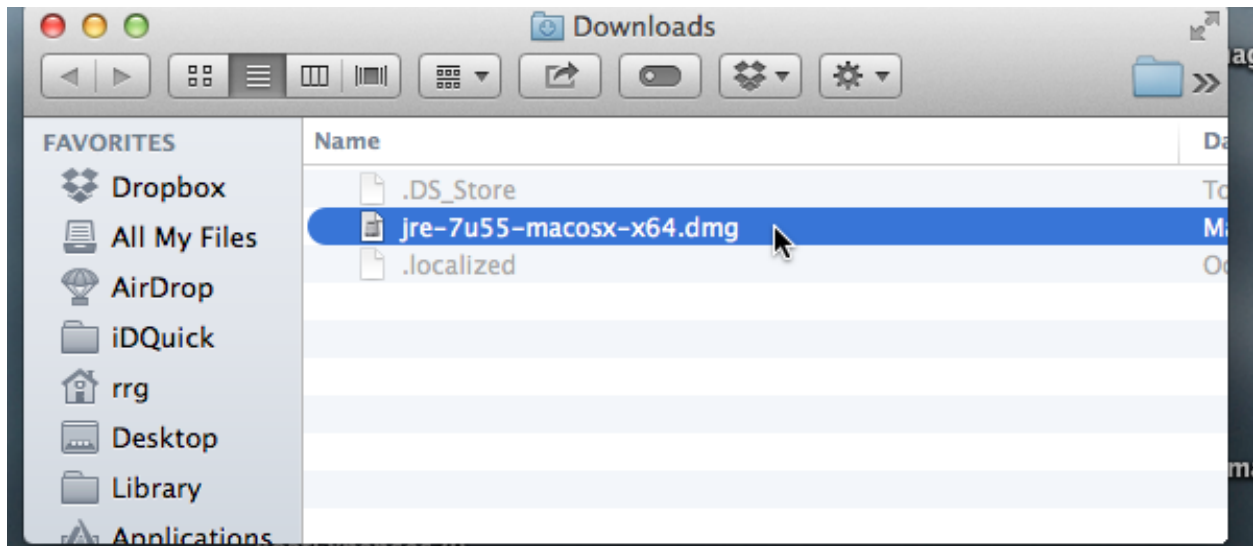

**Free Java Download**

» [What is Java?](#) » [Do I have Java?](#) » [Need Help?](#)

2. Open your Downloads folder

3. Double click the installer

4. Double-click on the **package icon** to launch install Wizard

The Install Wizard displays the Welcome to Java 7 installation screen. Click **Continue**

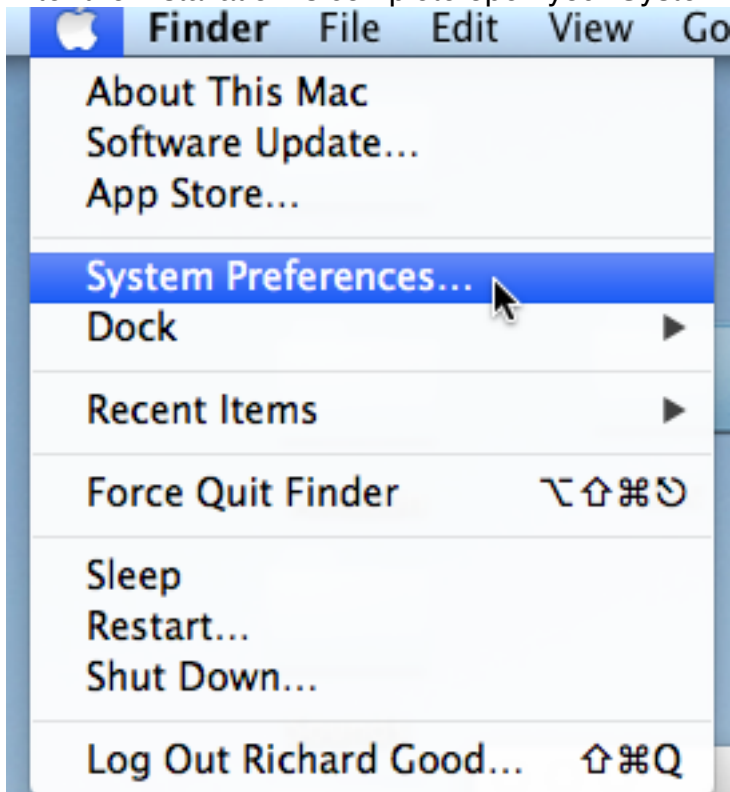

On Standard Install on Macintosh HD, Click the **Install** button

After the installation has completed, a confirmation screen appears. Click **Close** to finish the installation process.

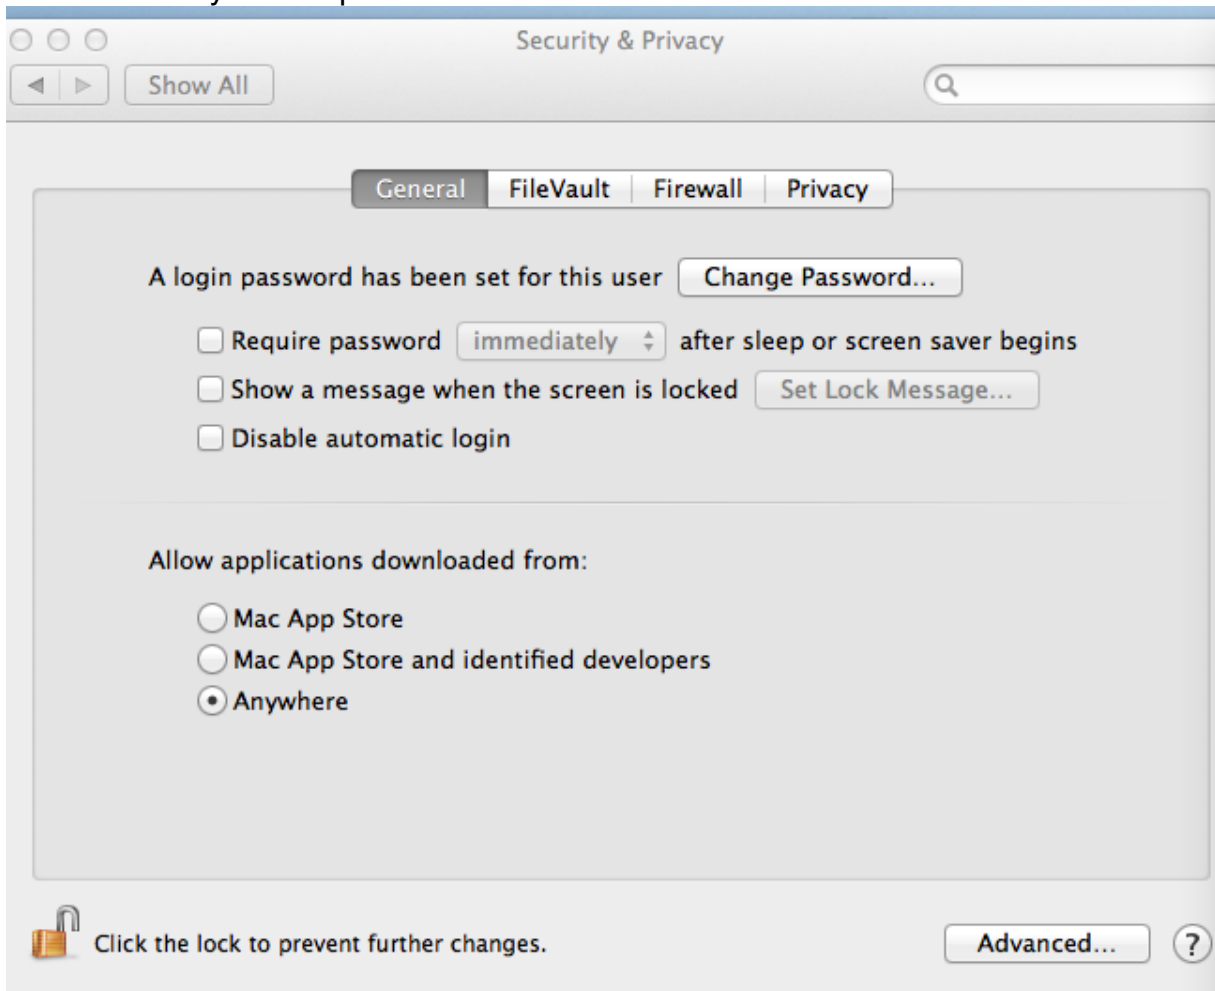

5. After the installation is complete open your System Preferences.

6. Open the Security & Privacy panel

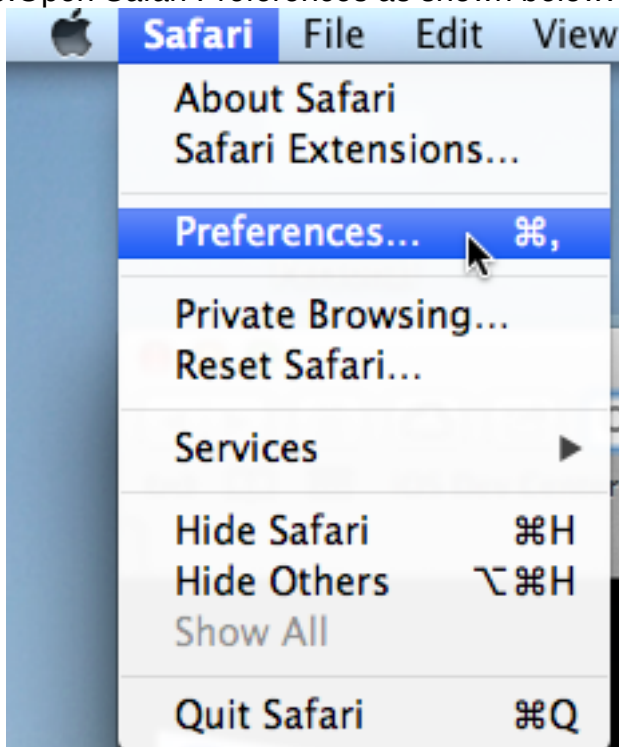

7. Be sure the Allow applications downloaded from Anywhere radio button is checked as shown below. If its not checked click on the lock to allow changes and then choose the Anywhere option.

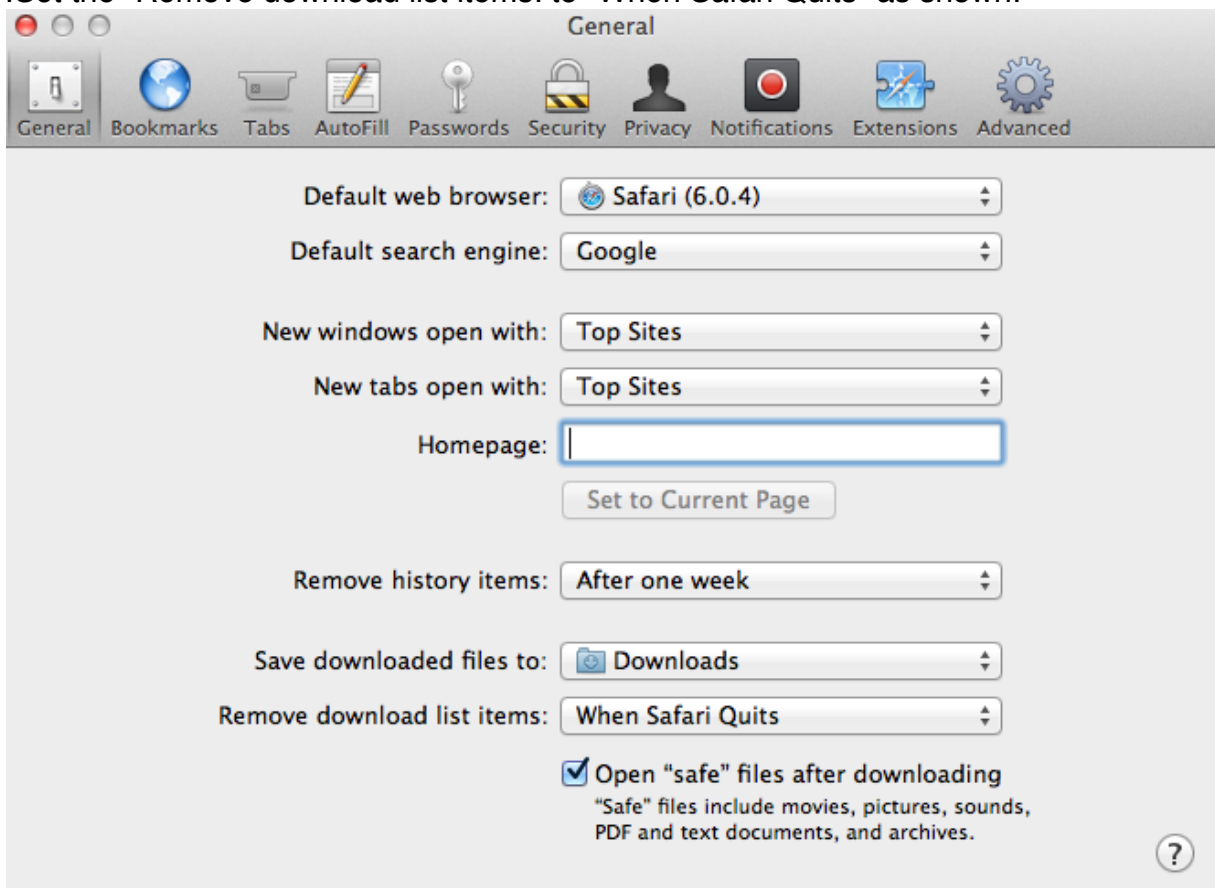

8. Close the Security&Privacy panel.

9. Open Safari.

10. Open Safari Preferences as shown below:

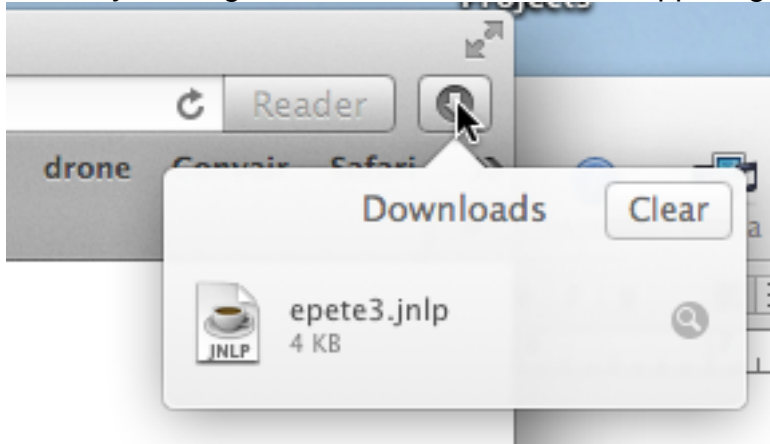

11. Set the "Remove download list items:" to "When Safari Quits" as shown:

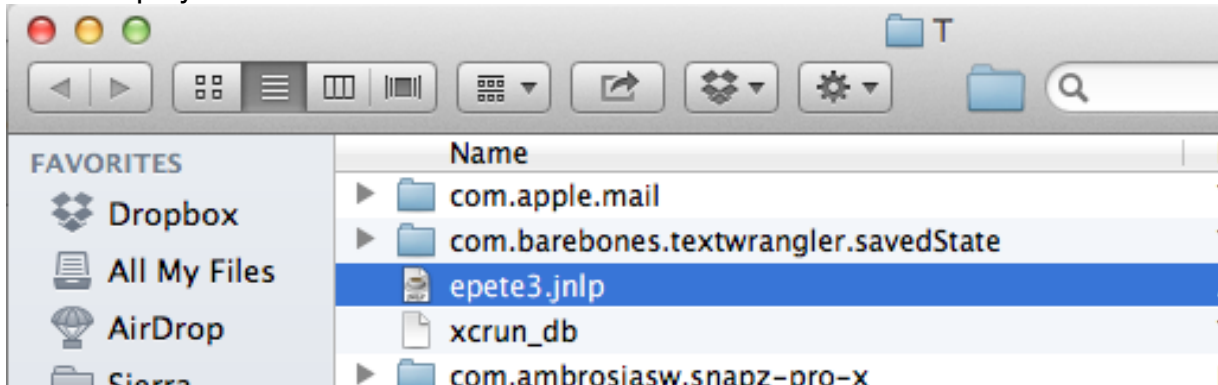

12. Close Safari preferences.

13. goto [software.egoscue.com](http://software.egoscue.com) and login and follow directions on the page. Once you have got to and clicked on the download epete link open the download display in

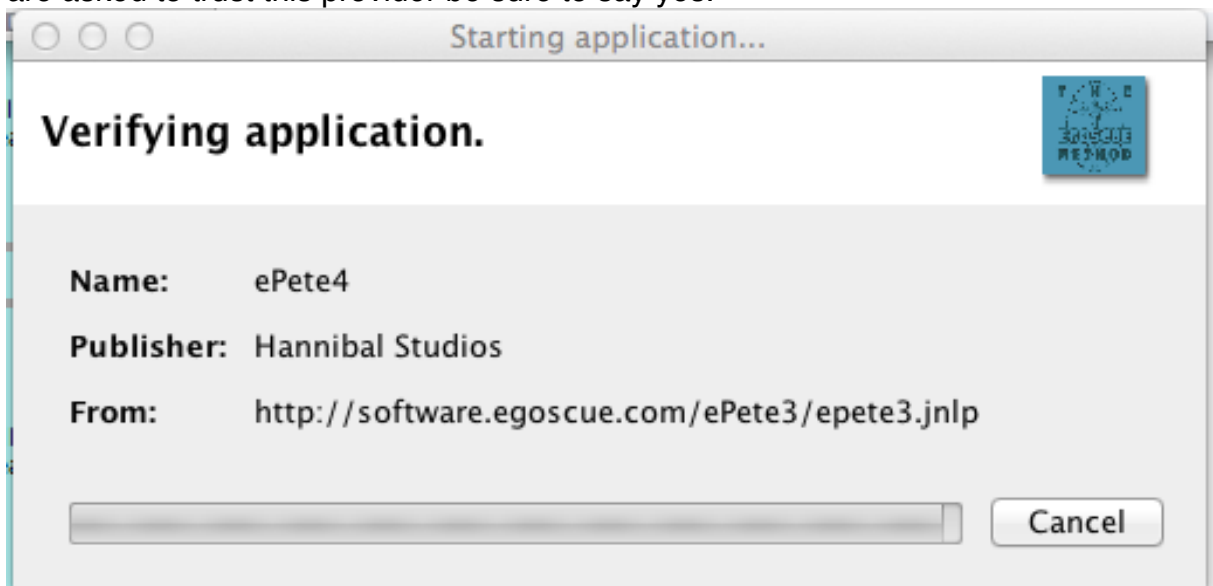

safari by clicking on the  located in the upper right corner of the Safari window.

14. Now click on the small magnifying glass to the right of epete3.jnlp. You will see a folder display like the one below:

15. Double click the epete3.jnlp file name. ePete installation should commence. If you are asked to trust this provider be sure to say yes.

16. Once the installation completes you will see the login screen.

17. Please use the the "Set user" button to enter your login credentials so ePete can remember them. You should also find a icon on your desktop to launch epete with.
